School vaccination program

Keeping your child up to date with routine vaccinations helps to protect them from serious preventable diseases such as meningococcal, whooping cough, tetanus, and cancers that are caused by HPV (human papillomavirus).

As part of the NSW School vaccination program, students in Year 7 are offered free vaccines for diphtheria-tetanus-pertussis (dTpa) and human papillomavirus (HPV). In Year 10, students are offered the meningococcal ACWY vaccine.

Parental consent is required for your child to receive routine vaccinations at school. If your child is in Year 7 or Year 10 this year, you can now provide this consent online. You will receive an email from us with details on this year's school vaccination clinic and information on how to provide consent for your child's vaccinations.

From February 2023, children in year 7 will now only need one dose of HPV vaccination. This change has been endorsed by the Australian Technical Advisory Group on Immunisation (ATAGI) based on evidence showing that one dose provides the same level of protection against HPV as two doses.

If you have already consented to your child receiving two doses of HPV vaccine, they will only receive one dose.

If your child previously missed their second dose of HPV vaccine, they are now considered fully vaccinated and do not require a second dose.

A small number of students who are immunocompromised are still recommended to receive a three-dose course of HPV vaccine. If your child is immunocompromised, it is important to discuss their immunisation needs with their GP.

If your child misses a school vaccination clinic, you can speak to a GP or pharmacist about catching up on vaccination.
